

## **INSTALLATION MANUAL - WPS18-U4N-FD-PC**

### **IMPORTANT: READ ALL INSTRUCTIONS BEFORE THE INSTALLATION**

# A WARNING

- Risk of fire and electrical shock.
- This installation and maintenance must be performed only by a qualified electrician in accordance with the National Electrical Code and relevant local electrical codes.
- Be certain the power is off during both installation and maintenance.
- The photocell installed in this fixture is rated 120-277V.
- Fixture voltage must match supply voltage.
- The fixture must be connected to an electrical system with the correct grounding conductor.

#### WIRING DIAGRAM/120-277V

æ.

#### **IMPORTANT: SAVE THESE INSTRUCTIONS FOR FUTURE REFERENCE**

#### MOUNTING WITH 1/2" CONDUIT AT THE BOTTOM

1. Remove the screws on both sides of the lens. Remove the reflector cover by loosening the 2 screws.

3. Connect black for line voltage / white for neutral / bare wire for ground.

2. Remove the threaded plug from the bottom. Using a liquid tight connector, plug the supply conduit into the fixture. Knock out screw holes on the back housing and attach the fixture to the wall with proper screws. Use the supplied gasket for a weather-tight seal.

4. Replace the reflector and lens carefully by reversing the procedures used to remove them.

**MOUNTING WITH JUNCTION BOX** 

1. Remove the screws on both sides of the lens. Remove the reflector cover by loosening the 2 screws.

3. Connect black for line voltage / white for neutral / bare wire for ground.

2. Knock out the screw holes and the hole in the center of the back housing. Plug the wires from the junction box into the fixture through the center hole. Attach the fixture to the junction box with proper screws. Use the supplied gasket for a weather tight seal.

4. Replace the reflector and lens carefully by reversing the procedures used to remove them.
